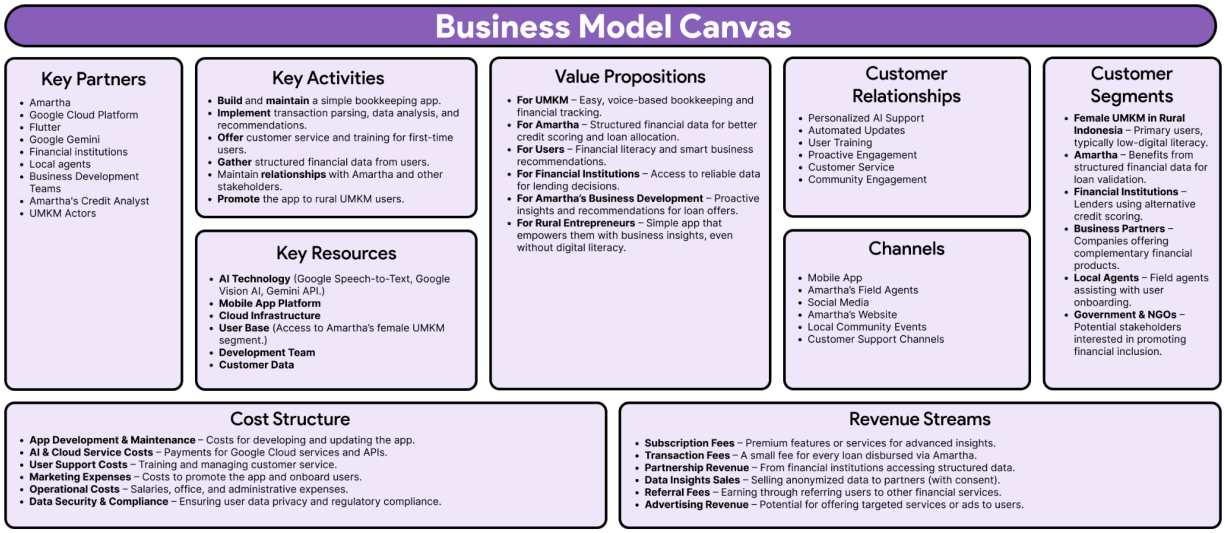
Amartha X GDG Jakarta Hackathon Business Canvas Document

Version: 1.0
Team Name, Project Title: Archive, KuBuku

Anthony Edbert Feriyanto (DevOps&Cloud), **Brian Altan** (Full Stack Developer), **Christian Yudistira Hermawan** (UI/UX), **Rahardi Salim** (Project Manager), **Vincent Davis Leonard Tjoeng** (AI Engineer)

1. Business Model Canvas & Value Proposition



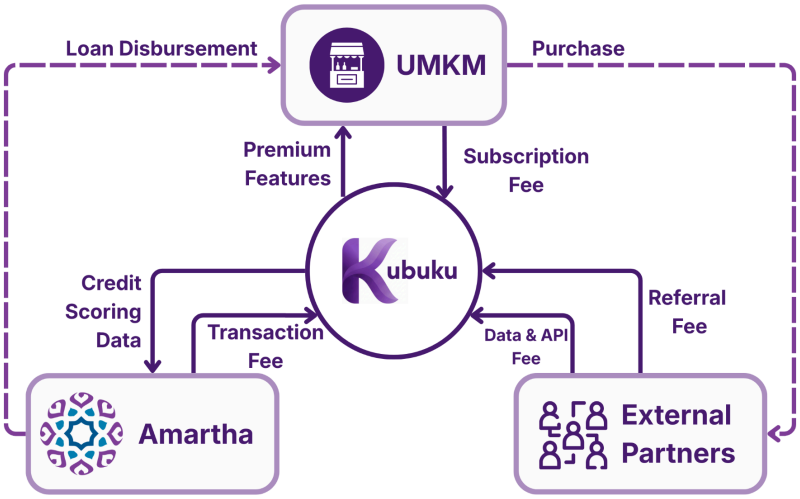
KuBuku empowers **rural women micro-entrepreneurs in Indonesia** by offering an **AI-powered bookkeeping app** that translates unstructured financial inputs like voice notes and receipts into actionable records, supporting those with low digital literacy. The app works seamlessly with **Amartha's lending platform**, **Google Cloud AI**, and includes **agent-led onboarding** for tech-limited users.

Its core value lies in **simplifying financial management** for underserved groups, generating real-time insights and automating business reports to help users **qualify for loans** and **reduce default rates**. The app's integrated **financial literacy** modules and **predictive analytics** improve **credit scoring** for Amartha, while agents and community leaders help drive adoption through trusted, **offline channels**.

KuBuku **generates revenue** through a diversified model: users pay **subscription fees** for premium analytics and business tools, and small **transaction fees** are applied to loans or working capital disbursed through Amartha. The platform forms partnerships with financial institutions and NGOs, offering them access to **anonymized**, **structured financial data** with user consent for credit scoring, market research, or targeted financial services. Additional streams include referral fees for recommending suitable financial products such as savings plans or micro-insurance. This **multi-pronged revenue strategy** supports KuBuku's mission to expand **financial inclusion** for Indonesia's **rural entrepreneurs**.

2. Revenue Model

KuBuku **revenue model** is designed to generate income through multiple streams:



1. **Subscription Fees**: KuBuku will charge users a small subscription fee for premium features, such as advanced analytics, deeper financial insights, or additional recommendations.
2. **Transaction Fees**: KuBuku will charge a small fee on loans or working capital disbursed through Amartha.
3. **Partnership Revenue**: KuBuku can partner with financial institutions or other businesses that want access to structured financial data from the app's users. These partners will pay for access to the data for lending, credit scoring, or other financial services.
4. **Data Insights Sales**: With user consent, KuBuku can sell anonymized, aggregated financial data to relevant stakeholders, like NGOs, government agencies, or financial institutions, interested in understanding market trends or offering targeted services.
5. **Referral Fees**: KuBuku may also generate income through referral fees by promoting or recommending other financial products or services that could benefit the users, such as savings plans or insurance.

3. Market Impact

1. Financial Inclusion

KuBuku expands **financial access** for Indonesia's unbanked by onboarding 10,000+ **women micro-entrepreneurs**. It brings modern financial tools directly to **underserved** rural communities.

2. Lower Loan Defaults

Daily **business activity** is transformed into usable credit data, lowering default rates by **up to 30%.** This creates **safer lending** for both Amartha and its borrowers.

5. User Engagement

AI-powered financial features support strong **user retention**. KuBuku targets **20–40%** monthly active users with sustained growth.

3. Faster Credit Access

Smarter reporting and **real-time insights** help underserved users qualify for loans **faster**. As a result, approval rates increase **by 20–30%**.

4. Business Growth

With access to **credit** and **digital management**, SMEs can boost their revenue by **12–20%**. KuBuku becomes a long-term engine for business expansion.
